SUMMARY

Backend engineer with a **B.S. in Computer Science** from Western Governors University (2021), focused on **blockchain infrastructure** and **AI systems**. Built and operate three production backends solo — Python LLM pipelines, smart-contract analysis workers, REST APIs, and scheduled job orchestration — powering SecureFlow, MemeFactory, and AgentFlow. Strong in Python, Node.js, Solidity, PostgreSQL, and multi-model AI integration. Available for full-time, contract, or freelance backend roles in Web3, AI, or platform engineering.

EDUCATION

B.S. Computer Science — Western Governors University (WGU), 2021

Algorithms · Data Structures · Software Engineering · Databases · Cloud Computing · Discrete Math

SKILLS

Backend	Python · Node.js · FastAPI · Flask · REST APIs · async workers · job queues · webhooks
Blockchain	Solidity 0.8.x · Foundry · EVM · Ethereum / Arbitrum · token launches · smart-contract security
AI / LLM	GPT-4o · Claude · LangChain · RAG · embeddings · function calling · prompt engineering · multi-LLM orchestration
Data & Infra	PostgreSQL · SQLite · Redis · Docker · Linux VPS · Cloudflare · GitHub Actions · scheduled pipelines
Security	Slither · Mythril · Echidna · Foundry fuzzing · static analysis · vulnerability triage

EXPERIENCE

Backend Engineer / Independent Consultant — Blockchain & AI

2021 – Present

Remote

- Architected **SecureFlow** backend: Ethereum/Arbitrum contract ingestion, Slither orchestration, GPT-4/Claude triage (15+ vulnerability classes); RAG API for security questionnaires. secureflow.tech
- Built **AgentFlow** backend: Next.js API routes, OpenAI + RAG, conversation storage, embed-widget API, analytics. agentflow.llc
- Delivered **MemeFactory** launch infrastructure: Solidity deployment pipelines, token launch workflows, go-to-market automation. memefactory.it.com
- Own end-to-end backend delivery — API design, database schema, worker scheduling, LLM prompt chains, production monitoring, Linux VPS ops.

SELECTED PROJECTS

SecureFlow — AI Smart Contract Scanner (Backend)

Python · Slither · GPT-4o · Claude · Flask · SQLite · Linux VPS · secureflow.tech

- Continuous Ethereum + Arbitrum monitoring; end-to-end scan pipeline in **<60 seconds**.
- Worker flow: contract discovery → Slither → multi-LLM reasoning → structured report (15+ vulnerability classes).
- RAG subsystem indexes company docs; auto-answers vendor security questionnaires with citations.

AgentFlow — AI Customer Support Platform (Backend)

Node.js · Next.js API · OpenAI · RAG · PostgreSQL · agentflow.llc

- REST API for agent CRUD, knowledge-base ingestion, embedding pipeline, and chat inference.
- Conversation logging, analytics aggregation, embed-token authentication for third-party sites.
- Demo-mode inference (keyword + KB matching) runs without external API keys.

MemeFactory — Token Launch Platform (Backend / Web3)

Solidity · Solana / Base · Python · memefactory.it.com

- Backend workflows for token deployment, launch scheduling, community onboarding, listing coordination.
- ~30-day automated playbook from strategy call to handover; zero upfront cost for creators.

STRENGTHS

- **Backend-first builder** — APIs, workers, databases, and LLM pipelines are the core of every product.
- **Blockchain + AI intersection** — on-chain data ingestion combined with multi-model AI triage in production.
- **Solo ownership** — design schemas, write services, deploy workers, monitor production independently.
- **Remote-async native** — strong written communication, documentation-driven workflow.

Full-time · Contract · Freelance · Advisory | Backend Engineer · Blockchain Engineer · AI/ML Engineer · Platform Engineer · Web3 Backend

Live demos and backend architecture walkthroughs available on request.
